Crider Plant Moves “Further” Along

May 9, 2003 --- (Conway, AR) – CAT² and Crider Poultry, Inc. announced CAT² 's selection as software vendor for the Crider processing facility in Stillmore, Georgia.

CAT² will implement its further processing tool series (FPTS) along with its food safety system, Hazard Analysis Tools (HAT). The Crider fully cooked facility beginning operations in June, wanted a comprehensive system to begin its startup.

“We were impressed with the functionality of CAT² software offerings , said Bill Crider, Vice-President of Crider Poultry. “The modules contained in their further processing and food safety systems were just what we needed for our state of the art facility. These systems will support our present and future needs throughout our processing facility.”

Mike Sardinha, president of CAT² , said, “We are very pleased to have a client the caliber of Crider Poultry. We hope our systems will add even more to the quality process they have.”

About CAT²

CAT², a global software solutions and processing equipment company, provides software tools for the food industry in the areas of plant monitoring, HACCP, and further processing. They also produce food chilling and processing equipment for the poultry industry. For more information visit www.catsquared.com
